QND Computer Science Day 6

Mr. Schmidt

Today

- Adventure Game
- Due *today*
- Stay busy!
  - Add more conditions using `else if` or more nested `if`s
  - Test and help your neighbors!
- Loops
- Back to Robots

Programmers are lazy

- I don't want to write `robot.forward()` 15 times

`while` Loops

- Similar to `if` statements
- Repeats the block as long as the condition is true

```
while robot.facingEmpty() {
  robot.forward()
}
```

Counters

- What if I want to run for a specific number of iterations?
- Use `var` to make a counter

```
var counter = 0

while counter < 5 {
  counter = counter + 1 // add one to the counter
  robot.forward()
}
```

For Loops

- Simplification of `while` counters
- `counter` is unused and can be replaced with `_`

```
for counter in 0...5 {
    robot.forward()
}
```
