QND Computer Science Day 14

Mr. Schmidt

Backup plan: Arrays and Wordle

Recap

- Wordle

Stage 1: Grade a Guess

- Turn a string into an Array
- Get a guess from the user

Stage 2: Looping and Validation

- Put the guess part in a loop
- Check if the guess is the right length
  - Use `continue`
- Check if the guess is correct!

Stage 3: Guess Count Limit

- Track the number of guesses
- If guesses >= 6, tell the user they lost
- Random word from a word bank!

Color

- New Type!
- `ColoredString`

```
let colored = ColoredString("This is blue", .blue)
console.write(colored)
console.write(ColoredString("This is red!", .red))
```

Stage 4: Miscellania

- Use ColoredString instead of emoji
- Always compare in the same letter casing

Stage 5: Play again?

- Wrap it all in a loop
- When the inner loop exits, ask if they want to play again. Otherwise, break
- Type `Yes` with a capital Y (or compare with `.lowercased()`)

(bonus) Stage 6: Check Real Words

- `import Foundation`
- Make a URL request to dictionaryapi.dev
- Check the response

What's Next?

- Google AI Studio
- Final Project!
